Transport in Porous Media **24**: (1996).

Contents of Volume 24

Volume 24 No. 1 July 1996

KARSTEN PRUESS / A Fickian Diffusion Model for the Spreading of Liquid Plumes Infiltrating in Heterogeneous Media 1–33

SAMEER A. KHAN, GARY A. POPE and JOHN A. TRANGENSTEIN / Micellar/Polymer Physical-Property Models for Contaminant Cleanup Problems and Enhanced Oil Recovery 35–79

JANA ŠELIH, ANTONIO C. M. SOUSA and THEODORE W. BREMNER / Moisture Transport in Initially Fully Saturated Concrete During Drying 81–106

Volume 24 No. 2 August 1996

DIDIER LASSEUX, MICHEL QUINTARD and STEPHEN WHITAKER / Determination of Permeability Tensors for Two-Phase Flow in Homogeneous Porous Media: Theory 107–137

S. J. KOWALSKI and A. RYBICKI / Drying Stress Formation by Inhomogeneous Moisture and Temperature Distribution 139–156

MAHESH KUMARI and RAMA SUBBA REDDY GORLA / Combined Convection in Power-Law Fluids Along a Non-isothermal Vertical Plate in a Porous Medium 157–166

G. G. PEREIRA, W. V. PINCZEWSKI, D. Y. C. CHAN, L. PATERSON and P. E. ØREN / Pore-Scale Network Model for Drainage-Dominated Three-Phase Flow in Porous Media 167–201

AKHTER HOSSAIN and M. YAVUZ CORAPCIOGLU / Modeling Primary Substrate Controlled Biotransformation and Transport of Halogenated Aliphatics in Porous Media 203–220

PAUL J. HICKS JR. and ABRAHAM S. GRADER / Simulation of Three-Phase Displacement Experiments 221–245

Volume 24 No. 3 September 1996

M. S. BIDNER and P. C. PORCELLI / Influence of Phase Behavior on Chemical Flood Transport Phenomena 247–273

M. S. BIDNER and P. C. PORCELLI / Influence of Capillary Pressure, Adsorption and Dispersion on Chemical Flood Transport Phenomena 275–296

G. J. WEIR and W. M. KISSLING / Enhanced Conduction in Steady, Vertical Flows of Water, Steam and Carbon Dioxide in a Porous Medium 297–313

P. J. ROSS, R. HAVERKAMP and J.-Y. PARLANGE / Calculating Parameters for Infiltration Equations from Soil Hydraulic Functions 315–33

PIERRE MAGNICO / Permeability Evolution Induced by the Precipitation of an Advected Solute: Effect of the Microscopic and the Macroscopic Scales Competition on the Clogging Mechanism 341–375
